A decorative graphic element on the left side of the page, featuring a white circular shape with a red border that curves downwards and to the right.

Music brings your home to life and immerses you in a new environment. There have been many kinds of audio devices introduced over the last few decades, but this one is designed with audiophiles in mind. The TIS A is a new din rail module with many features that can make your home sound like a professional studio and bring color to your moments.

This device has a built-in 2x25W stereo amplifier and SD card MP3 reader, and it supports FM radio. With its high-quality sound system, the TIS Audio Player is exactly what you need in your garden while hanging out with friends during the holidays. Speakers all over your property can be connected and operated by this audio player.

This solution is equipped with variable auxiliary outputs, which makes it configurable with any external amplifier.

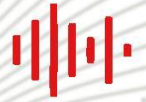

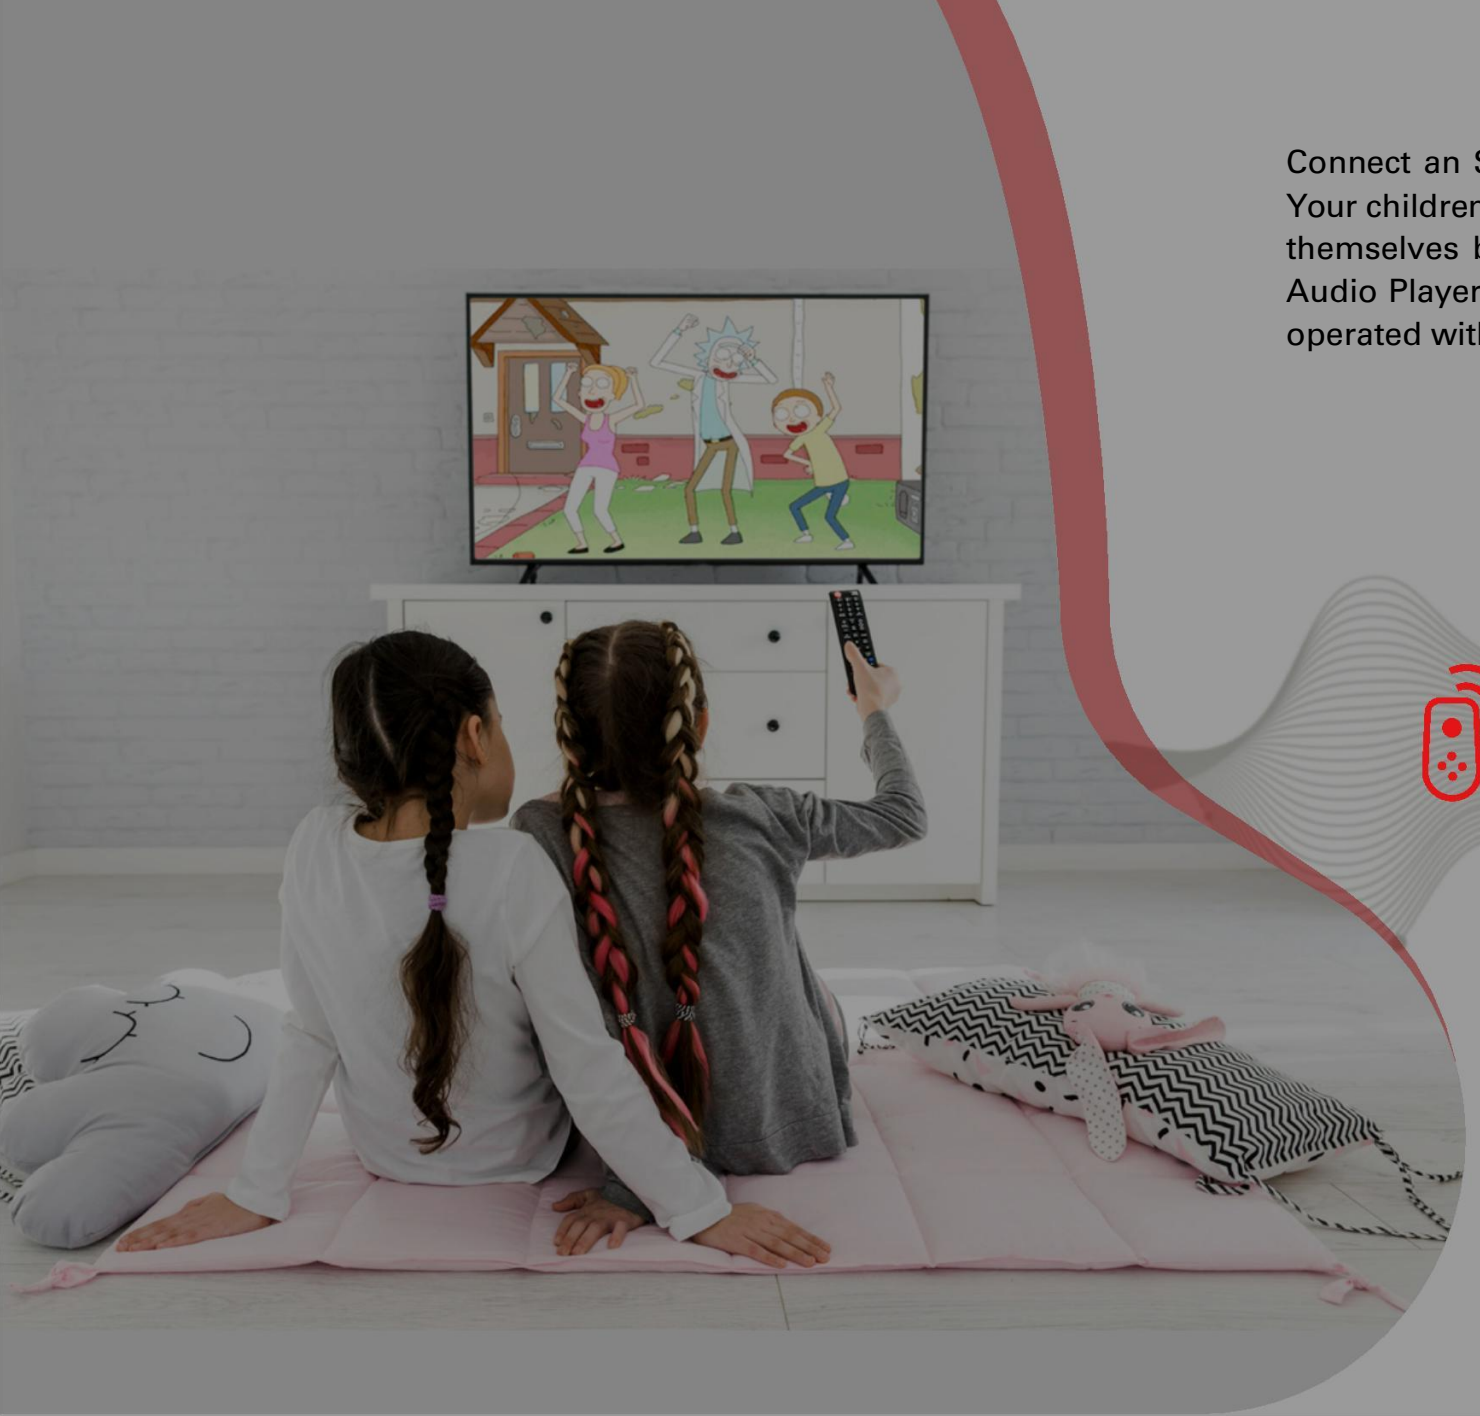

It has auxiliary inputs that can be connected to a TV output as well, so you can listen to your favorite TV show while you cook. Connect the speaker in the kitchen to the TIS Audio Player and enjoy its performance. Just make sure you don't forget about the food!

Connect an SD card to the TIS Audio Player. Your children can play their bedtime story for themselves before they go to sleep. The TIS Audio Player is very user friendly and can be operated with a remote control as well.

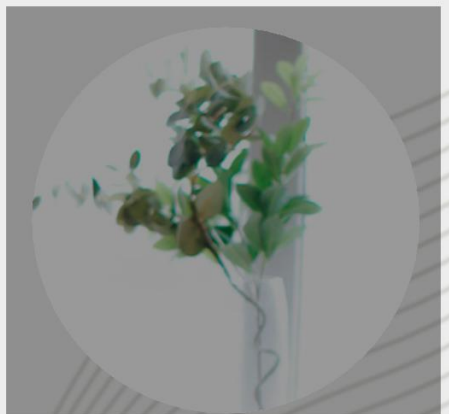

It can be managed via the TIS application. Install this app on your cellphone so you can listen to your favorite team's game while getting some household chores done.

This solution can be configured with the BUS network and some other third-party devices, such as water leak sensors. If you're too busy running on the treadmill to an energetic song and you've left the balcony door open for a while, the TIS Audio Player informs you. Also, it alerts you if there is a water leak somewhere in the house. This feature is important for security and energy-saving purposes.
