# LET THE LIGHT CHANGE YOUR WORLD

Are you a fan of parties? Do you enjoy dance lights? Do you want to turn your home into a dance hall? Well, we've got exactly what you're looking for. The TIS DMX controller will heat up your party more than you can even imagine.

This controller not only dims and turns lights on and off; it also creates various light colors and effects. Additionally, it can control all devices working under the DMX512 protocol. Once installed and linked to a TIS-BUS system, your home is no different than a big stage. You are able to manage all the lights in whatever way best suits the occasion. Is it your anniversary? Make a memorable small party with a few touches. Set this controller to create red effects while a romantic song is played, and invite your partner to dance a duet with you.

The good news is that the TIS DMX Controller is configurable with many WRGB light types. Whether you're throwing a bachelor party, changing the color effect of your building at a specific time, or your teenage boy just wants to hang out at home with his friends, your options are endless. Be your own DJ; set your favorite tone, effect, and light laser with the DMX Controller.

Working with this solution is also very simple. Your smart phone is your keyboard. You can control/dim all the lights with your fingertip. The TIS DMX Controller can easily replace a DJ DMX console. Simplicity and convenience is what this controller brings.

DMX48 is a model of this controller with 48 channels, and since this solution functions in the TIS-BUS system, connecting these channels means controlling an unlimited number of DMX devices. This model is suitable for big concert halls, fashion show halls, restaurant complexes, and more.

With the DMX Controller you can share your feelings with your home.

Install it, and let the light in.
