

LUNA

SERIES
TFT LCD PANEL

TIS

If you are one of those who wish to have multiple hands, here's probably what you are looking for.

Luna TFT panel, another stylish design by TIS smart home manufacturers, has a number of features which make this product a special and best-in-class solution. There are various options in its multipage design, shown in its touch screen and LCD, each of which is a tool to control a part of your smart home.

This device replaces all room lights switches, wall thermostat, audio stream and volume control, curtain switches, security console and many other features into one elegant single panel.

This panel is available in two colors of Black and White; however, the LED color can be altered to better fit into your interior design.

Now let's go through its characteristics so you can see its magical function.

Further, Luna TFT panel is capable of managing RGB lights in a spectrum of 256 colors. You can choose your favorite shade, set it with the furniture and with the option of curtain switches, open or close the living room's curtains and let Luna create a pleasant atmosphere for you.

One of the unique features of this device is that the language and pictures can be customized. Take pictures of your light, doors, windows, or electrical appliances, upload them, feel free to choose a name for them and get friendly with your home. You will not forget to close a window or door, because Luna notifies you.

The cooling, heating and venting settings of Luna TFT are configurable based on a digital thermostat; which means it can automatically detect the temperature of the inside and outside and be programmed to turn off/on a device.

Imagine you are coming back home in a hot day. You can turn on the AC earlier and cool your home. Here's where you can make use of Luna's timer. Set the time and get your works done in the most efficient way.

In the elegant and trendy interface of Luna TFT panel, audio control is enabled via AUX, USB, radio, SD card. What is lovelier than seeing your kid fallen to sleep listening to a sweet lullaby with excellent audio quality?

Also, you can define 12 scenarios with specific thermal, audio, and lighting moods. If you want to throw an evening party, or if you are going to have a romantic dinner with your date, just create your favorite setting with a touch of your fingertips.

The security arming moods in this device are quite robust, including Vacation (being away from home for a while), Away (being away for a couple of hours), Night (notifying trespassing), and Panic Button in case of emergency situation. Another security option of this panel is the Duress password which if entered, your chosen person will be informed immediately.

With Luna TFT panel you can do multiple tasks and make **your wish come true.**

Additionally, it acts like a smart wall calendar, as it shows precise time and date in every page. You will not miss congratulating your sister on her birthday because Luna TFT panel is here to remind you of important dates.

Another beneficial feature of this device is its energy meter; a component which updates you about current and overall electricity consumption, and electrical bills.

You can use weather station to know about the climate situation, i.e. the temperature, humidity, the sun's UV, the speed and direction of wind, rain news with figures and whatever you need to manage your energy consumption. Health sensor of these panels tell you how is the weather inside regarding the health factor and Carbon Dioxide.

Personalizing Luna TFT is very simple. Whenever you want to customize an option, push that button and choose what suits your plan and design best.

As you can see this smart product professionally is engineered to make living much more convenient.
